RESEARCH INTERESTS

I am interested in large language model agents, particularly in how they can continually and stably self-improve from their own experience, how to evaluate them at scale in an efficient, robust, and trustworthy way, and how to make agentic reasoning more token-efficient so that capable agents remain viable on small, widely accessible models.

EDUCATION

Nanyang Technological University *Aug. 2024 – Jun. 2026*
M.Sc. in Financial Technology (Intelligent Process Automation) *Singapore, Singapore*

Beijing University of Posts and Telecommunications *Sep. 2020 – Jun. 2024*
B.Mgmt. in E-Commerce Engineering with Law *Beijing, China*

Queen Mary University of London *Sep. 2020 – May. 2024*
B.Eng. in E-Commerce Engineering with Law (dual degree) *London, UK*

PUBLICATIONS

Unified Context Evolution for LLM Agents
Zixuan Zhu, Yitong Hu, Yong Dai, Junfeng Fang, Chunyang Jiang, Senkang Hu, Yuzhi Zhao
Under review arXiv:2606.02304

RESEARCH EXPERIENCE

Research Collaborator *Dec. 2025 – Present*
Stanford University *Remote*

- Core maintainer for *Harbor* and sub-team lead of token analysis.
- Built benchmark adapters (e.g., the Berkeley Function-Calling Leaderboard, BFCL) and agent integrations (Qwen Code, Kimi CLI); developed the review bot and led adapter review and standardization.

Research Assistant *Sep. 2021 – May. 2023*
Lab of Software Intelligence & Social Computing, BUPT *Beijing, China*

- Designed scholar embeddings and a PageRank-based matching method for interdisciplinary collaboration discovery.
- Built *CollabXplorer* for scholar profiles, similarity search, and collaboration recommendation; recognized as a BUPT National Innovation & Entrepreneurship Project.

INDUSTRIAL EXPERIENCE

Business Intelligence & Analysis Intern *Jul. 2025 – Oct. 2025*
SeaMoney & MariBank *Singapore, Singapore*

- Built credit-risk models for retail-credit product lines across multiple markets, supported reject-rule governance and standardization, and automated liquidity and market-risk reporting.

Data Science Intern *Apr. 2023 – Dec. 2023*
Beijing International Data Exchange *Beijing, China*

- Developed fraud-detection and demand-forecasting models for insurance and operations scenarios.

PROJECTS

Harbor ⋆2.7k *Core Maintainer*
Open-source framework (by the Terminal-Bench team) for evaluating and optimizing LLM agents. It runs agents across third-party benchmarks, builds and shares custom environments, scales experiments to thousands of parallel sandboxes, and generates rollouts for reinforcement learning.
